DIRECTIONS

SupaSafe Clean & Disinfect is a Commercial Grade Cleaner & Disinfectant used as a surface spray.

Start with spraying a few squirts onto the cloth, then spray the surfaces you wish to sanitise, and follow with wiping.

Ensure you don't try to 'dry' the surface, but the wiping action is important because this mechanical action will help to break any bond with the surface and to bring the contaminants up somewhat from the surface.

Leave the surface to dry naturally.

It's important that this 'wet wiping' is used to give the product the best possible chance of working.

Required contact time of 10 minutes.

Can be applied on surface temperatures from 4°C up to 100°C.

SupaSafe Clean & Disinfect is a hazardous material which should be handled with gloves and goggles consult the Safety Data Sheet for further product safety information.

Disclaimer: This data sheet is to provide information on the product based on current knowledge. It does not constitute a guarantee. Always test a small inconspicuous area first to ensure that the final result is satisfactory
